

Build your Business Case with the Business Case Builder

What is the Business Case Builder?

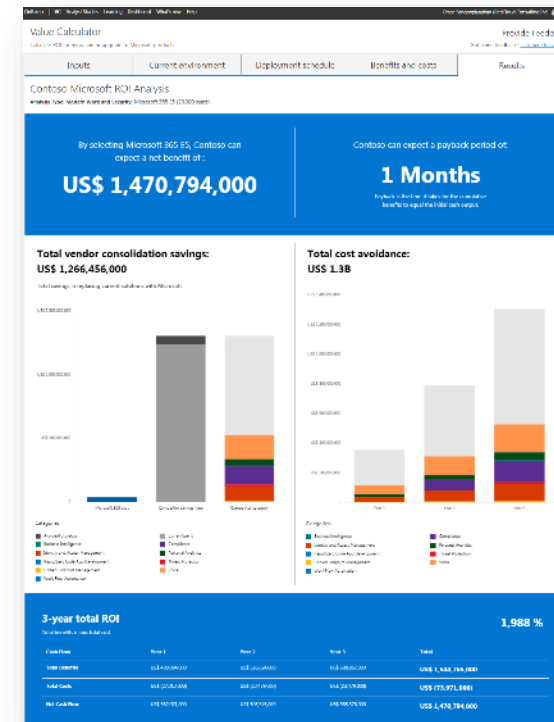

Find the tool at <https://aka.ms/BusinessCaseBuilder>

The Business Case Builder, available for partners and Microsoft sellers, uses **real customer data from third-party studies** to show the ROI that your customer can achieve with Microsoft solutions across **Modern Work, Security, Surface, Biz Apps, Azure and more!** The BCB guides you through the process of creating a **custom business case** specific to your customer's environment and needs through **three simple conversations**.

Leverage the BCB to accelerate your deal and demonstrate:

- Vendor consolidation savings
- Business value and benefits
- TCO – Total Cost of Ownership
- Value of deployment and usage
- Solution costs across licensing, administration, deployment

+ *Much more!*

Why use the Business Case Builder?

- Shift the conversation from price to value
- Show the value of the Microsoft 365 platform
- Satisfy the demands from procurement or finance for a business case
- Win competitive deals by demonstrating TCO savings
- Simplify the value conversation for complex deals that involve multiple SKUs and complex deployments
- Easily model multiple scenarios to compare licensing options

"The **Cost Take Out piece is extremely valuable**. The data points that come out of this are as valuable as the rest of the parts combined."

"The structure of the BC is **concrete, simple, and a great conversation** to have with the customer"

John Danner
SSP - Healthcare

Melanie Mayo
SSP - Latam SMB

Value Realization Data

Instructions

This data can be used to help determine how fast the customer is realizing the value of their investment. It does not take into account products that are assumed value is generally taken from the price for the standalone tool for that product. For Tools and other products that are not sold standalone, the price is taken as a percentage of the Office 365 E1 price or other values as needed to match customer priorities. Generally the deployed value and third-party displacement value should be aligned, but you may have to decide which one is more appropriate based on the level of precision as accurate as the data on the Current Environment and Deployment tabs.

Third-party displacement value from the Current

	Year 1	Year 2	Year 3
Total displacement from the Current Environment	CAD\$1,928,704	CAD\$1,283,274	CAD\$1,194,274
Percent of third-party displacement realized per year	49%	84%	100%

Deployed Value - percent of potential value deployed (for products that are used)

	Year 1	Year 2	Year 3
	47%	79%	100%

[illegible]

What's a business case anyway?

A business case (or cost/benefit analysis) is a financial document used to justify an investment. The business case looks at the cost of the investment – in our case costs include licensing, hardware, deployment, partner services, administration, bandwidth and potentially other costs related to purchasing and using Microsoft 365, Azure, and Surface products. It then looks at the benefits of the investment decision – benefits could include direct cost savings such as competitor displacement, efficiency gains such as improved workflows through automation, and improved business effectiveness, such as better product designs or faster time to market. The result of a business case is a set of financial metrics that are used to compare investment decisions.

- **Net benefits** – is total benefits minus total costs – this is a simple way to see if the project will generate value in the time period being analyzed
- **ROI** – simply the ratio of net benefits divided by costs expressed as a percentage. ROI is a measure of how much your benefits exceed your costs as a percentage. A positive ROI means your benefits are higher than your costs.

- Pros – easy to understand and calculate
- Cons – doesn't account for the size of the project or the timing of the benefits

- **Payback** – the simplest financial metric, payback tells how long it will take for the benefits to exceed the costs – typically expressed in months. A 3-month payback on a \$1,000 investment would mean that you expect to receive \$1,000 in benefits during the three months after you make the investment.

- Pros – easy to understand
- Cons – doesn't account for the size of the project

- **NPV** – net present value – this is the gold-standard of financial metrics and the most common term used to describe projects by financial decisionmakers. NPV is expressed in currency (e.g. dollars) and represents the value of an investment in excess of the cost of the capital used to make the investment (this is called the discount rate). If a project has an NPV of \$1,000 then the moment you make that investment your company is, in theory, \$1,000 more valuable. Most companies require a positive NPV to consider an investment.

- Pros – makes comparing investment decisions easy
- Cons – can be difficult to calculate, doesn't account for the rate of return

- **IRR** – internal rate of return – expressed as a percentage – this metric tells you the return you can expect on your investment. If you make an investment of \$1,000 with an IRR of 10% over 3 years, then you would expect your investment to be \$100 more valuable each year over the 3 years. An IRR generally has to exceed the discount rate for a project to be considered.

- Pros – shows the growth in value
- Cons – difficult to calculate

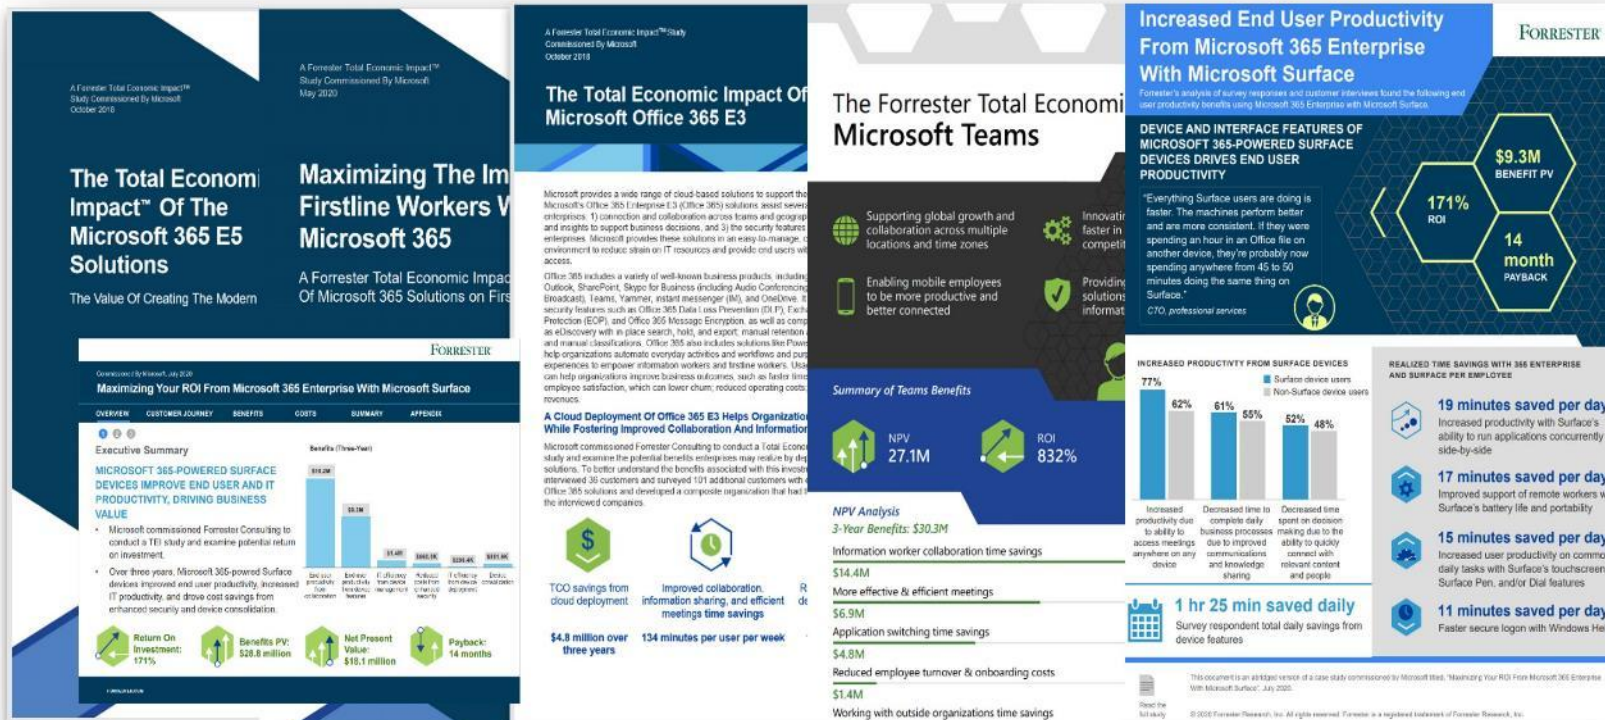

“In short, **payback** tells you how fast you get your money back and is used to measure risk, **NPV** tells you the total value of the investment, and **IRR** tells you the efficiency of the investment.”

Third party studies – data sources for the Business Case Builder

Two Versions of the Business Case Builder

Equivalent tools – choose by personal preference

[Online Business Case Builder \(OBC\)](#) – standard

- Web-based tool
- Easy to use, looks great for customers
- Starting point for customer dialogue
- Basic output slides

[Excel Business Case Builder \(EBC\)](#) – advanced

The screenshot shows the 'Value Calculator v7.2 - released 28Nov2022' interface. It includes a 'Tool Setup' section with fields for Company name, Microsoft TPID, Industry, Country/Region, Currency, Exchange rate, Total users, Company revenue, Company gross profit margin, Annual fully burdened cost for IT admin FTE, Annual fully burdened cost for knowledge worker, Annual fully burdened cost for frontline worker (if applicable), and How many years is your analysis? It also features a 'Which solution plays do you want to discuss?' section with checkboxes for various Microsoft products and services. A 'Begin Analysis' button is visible.

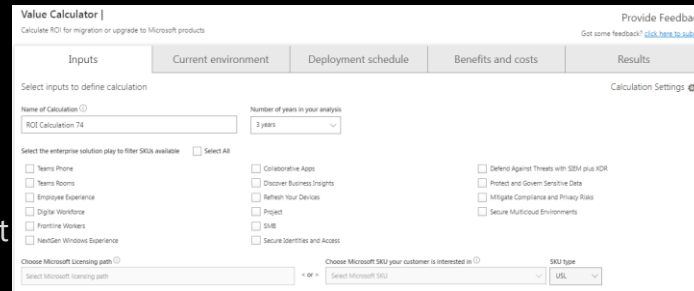

Field	Value
Company name	Contoso
Microsoft TPID	12345678
Industry	Other Commercial
Country/Region	United States
Currency	\$
Exchange rate	\$1.00
Total users	1,000
Company revenue	\$100,000,000
Company gross profit margin	37%
Annual fully burdened cost for IT admin FTE	\$89,376
Annual fully burdened cost for knowledge worker	\$58,800
Annual fully burdened cost for frontline worker (if applicable)	\$35,280
How many years is your analysis?	3

- Excel workbook with macros
- Flexibility to change calculation formulas
- Deeper customer dialogue & iterations
- Detailed output slides
- Detailed analyses for Teams Phone, Teams Rooms and Google complete

How to use the Online BC – 4 easy steps and three simple customer conversations

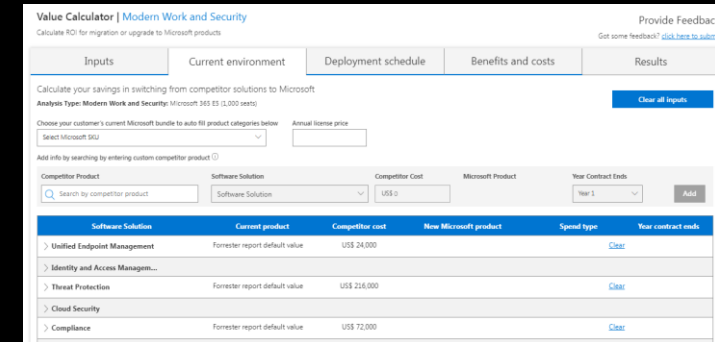

Step 1 – Inputs – what is the customer scenario?

- Pick your user experience using the solution plays
- Select the licenses that apply to your opportunity
- Mix and match licenses across Modern Work, SCI, Surface, Biz Apps, Azure
- Pricing pulled from price lists but can be modified by year

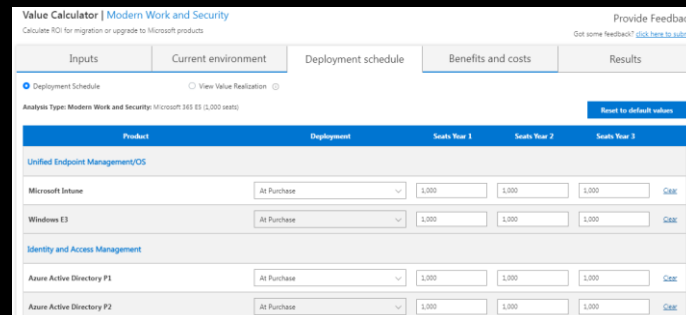

Step 2 – Current Environment – can your customer save from vendor consolidation?

- Initial customer conversation
- Use the Current Environment questionnaire
- **Generates hard cost savings**
- Dropdown of most common competitors with pricing
- Delay benefits if required
- Current spend and avoided future cost

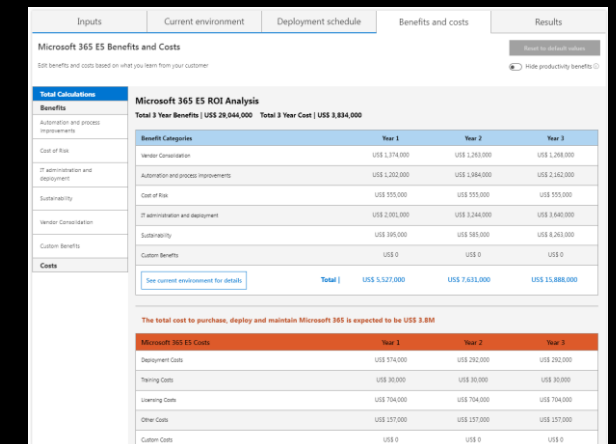

Step 3 – Deployment - what products will your customer use and when?

- Second customer conversation
- **The deployment schedule makes the results realistic**
- Enter a deployment schedule for each licensed product
- Vary schedule by year

Step 4 – Benefits and costs – how much will they spend and what are the business impacts?

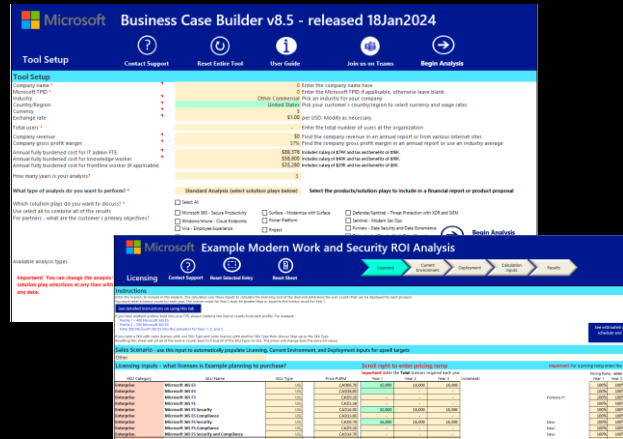

- Final customer conversation
- The least important tab – fine-tuning only
- Use a partner to help estimate costs
- **Review and remove benefits that don't apply before showing to the customer**
- Fine-grained inputs for all calculations

How to use the Advanced BCB – 4 easy steps and three simple customer conversations

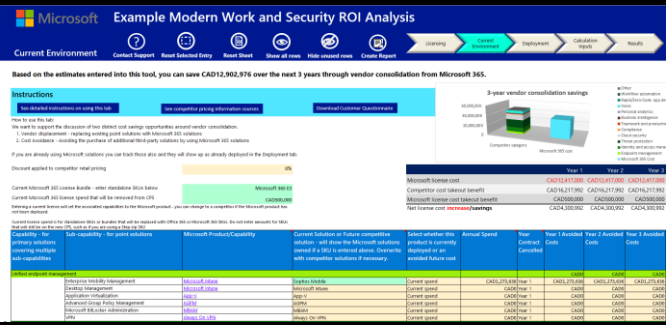

Step 1 – Inputs - what is the customer scenario?

- Pick your user experience using the analysis type
- Filter the licenses for the Standard Analysis with the solution plays
- Select the licenses that apply to your opportunity
- Mix and match licenses across Modern Work, SCI, Surface, Biz Apps, Azure
- Pricing pulled from price lists but can be modified by year

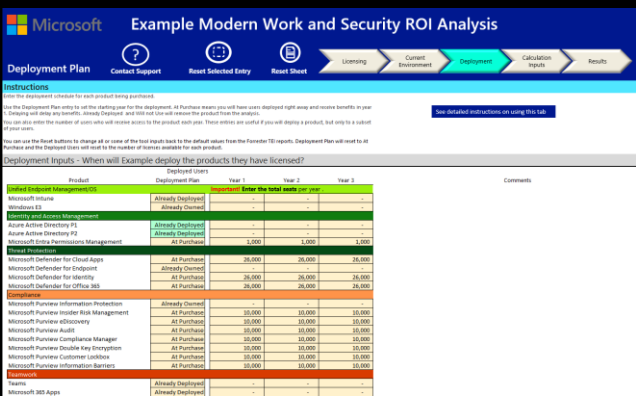

Step 2 – Current Environment – can your customer save from vendor consolidation?

- Initial customer conversation
- Use the Current Environment questionnaire
- **Generates hard cost savings**
- Dropdown of most common competitors with pricing
- Delay benefits if required
- Current spend and avoided future cost

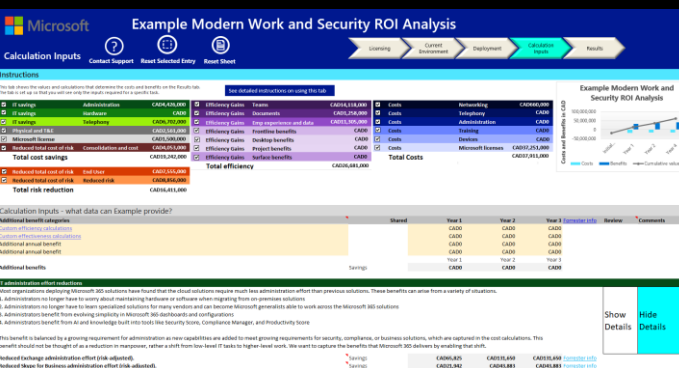

Step 3 – Deployment - what products will your customer use and when?

- Second customer conversation
- **The deployment schedule makes the results realistic**
- Enter a deployment schedule for each licensed product
- Vary schedule by year

Step 4 – Benefits and costs – how much will they spend and what are the business impacts?

- Final customer conversation
- The least important tab – fine-tuning only
- Use a partner to help estimate costs
- **Review and remove benefits that don't apply before showing to the customer**
- Fine-grained inputs for all calculations

Business value in the sales process

	 Continuous Planning	 Listen & Consult	 Inspire & Design	 Empower & Achieve	 Realize Value	 Manage & Optimize
Customer Experience	Understand the customer's business challenges and goals.	Present initial pitch decks to explain product value and determine customer interests.	Have the business value conversation for each solution play, potentially as part of a Solution Assessment or Workshop. Value Conversations 1. Current Environment 2. Deployment 3. Costs and benefits	Present combined business case and iterate on deal structure to close deal.	Utilize deployment schedule and key KPIs for tracking progress.	Show the value of unused capabilities. Value Conversations 1. Value Realization 2. Current Environment 3. Deployment 4. Costs and benefits
Resources		- Solution play decks - Product pitch decks - DMWL pitch decks - TEI reports - Business Case Builder	- Solution Assessment - Partner workshop - Current Environment questionnaire - Business Case Builder	Business Case Builder	Business Case Builder	Business Case Builder
Key Activities	- Review Annual Report to learn about business goals and risks - Review financial statements for revenue, margin, and internal cost information	- Use BC to add custom numbers to pitch decks - Go deeper into the value conversation by sharing Forrester TEI reports	- Internal first-pass on BC - Have the Current Environment conversation - Could be part of the Solution Assessment or Partner Workshop - Use the Current Environment questionnaire - Have the Deployment Conversation - Could be done by partner - Have the benefits and cost conversation - Use partner input for costs - Remove all benefits that are not applicable - Create initial BC report for each solution play/product	- Combine separate business cases to create one overall story - Produce business cases for each licensing scenario if necessary - Refine the business case based on customer feedback - Create final business case and proposal		- Utilize BC value realization analysis to spur additional usage of deployed products - Create business case for unused products

Online BC

Inputs

Set up the licensing

1. Add Name of Calculation –optional but helpful if you are doing more than one analysis for the customer
2. Add the number of years in your analysis (up to 6 years).
3. Select the solution play – this will filter the SKU list, so check all that apply. It will also determine the UI and report generated.
4. Choose either a Licensing path (for SCI) or Microsoft SKUs from the drop-down menu.
5. Enter the seats per year (price/month will automatically populate.) Check modify to customize the price by year.
6. Add additional SKUs if needed.
7. Click Calculation Settings to update company revenue and salaries
8. Click “View results” to see a high-level analysis based on default values or “Next” to enter customer-specific data.

The screenshot shows the 'Value Calculator' interface for calculating ROI for migration or upgrade to Microsoft products. The interface is divided into five tabs: Inputs, Current environment, Deployment schedule, Benefits and costs, and Results. The 'Inputs' tab is active, showing a form with the following elements:

- 1** Name of Calculation (ROI Calculation 72)
- 2** Number of years in your analysis (3 years)
- 3** Select the enterprise solution play to filter SKUs available (Select All, Teams Phone, Teams Rooms, Employee Experience, Digital Workforce, Frontline Workers, NextGen Windows Experience, Collaborative Apps, Discover Business Insights, Refresh Your Devices, Project, SMB, Secure Identities and Access, Defend Against Threats with SIEM plus XDR, Protect and Govern Sensitive Data, Mitigate Compliance and Privacy Risks, Secure Multicloud Environments)
- 4** Choose Microsoft Licensing path (Select Microsoft licensing path)
- 5** Enter seats per year (Year 1 Seats, Year 2 Seats, Year 3 Seats, Price per month, Modify price per year)
- 6** +Add SKU
- 7** Calculation Settings (gear icon)
- 8** View results (button)

New! Selecting solution plays can change the UI and report

- Any combination of SCI solution plays enables Licensing Paths and the CISO report
- Selecting only Employee Experience enables the Viva analysis and report
- Selecting only NextGen Windows Experiences enables the Windows 365 analysis and report

Online BC

Current environment

This is an important tab. It's where you will calculate the hard savings in switching from competitor solutions to Microsoft.

Entering competitors

1. Choose your customer's current Microsoft bundle in the drop-down list
2. Add Annual license price
3. Add a specific 'Competitor Product' + 'Software Solution'. The price might be populated or can be entered/updated
4. Or choose a specific competitor product from the drop-down list under each Software Solution.
5. Update the type of benefit and the year when benefits should begin.
6. Click "View results" to see a high-level analysis based on default values or "Next" to enter customer-specific data.

Export Slide Deck with Business Case

Building a Business Case

1. Download your Slide Deck with the customer's business case
2. Review and make any tweaks before presenting the business case to your customer

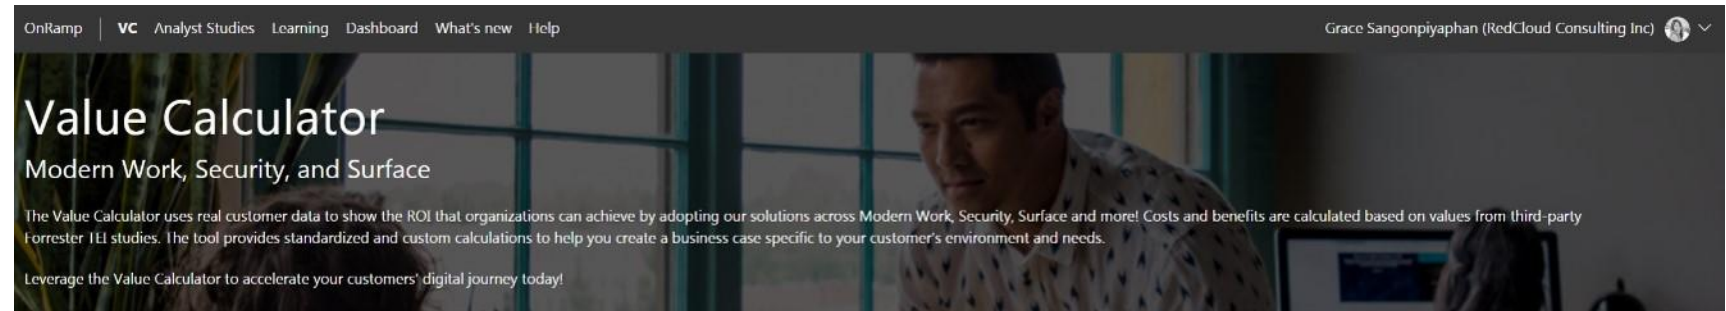

Advanced Business Case Builder

Transform website navigation

How to get to the Advanced Business Case Builder

1. Download [Advanced Business Case Builder](#) (applicable for offline/ in-depth Business Case Builder version)

The Process

Select your customer
Identify the account for which you'd like to complete an ROI analysis. Add an Account or click 'Dashboard' to view your existing accounts.

Input licensing information
To make creating business cases easier for key sales scenarios, we have created a custom calculator for each Enterprise sales play. Virtuous Upsell licensing scenarios are also available and will prepopulate the licensing, current environment, and deployment selections for the selected scenario.

Enter current environment
Input your current Microsoft and competitor solutions to calculate vendor displacement costs.

Customize results
Edit the deployment schedule based on your customer's needs. Customize cost and benefit calculations for a more detailed analysis.

Share the analysis with your customers
On the results page, download a shareable PowerPoint presentation with your unique calculation for your customer to share with their stakeholders.

Contoso Modern Work and Security ROI Analysis

Licensing

Contact Support

Reset Selected Entry

Reset Sheet

Licensing

Current Environment

Deployment

Calculation Inputs

Results

Instructions

Enter the licenses to include in the analysis. The calculator uses these inputs to calculate the licensing cost of the deal and determine the user counts that can be deployed for each product. You must enter a license count for each year. The license count for Year 1 must be greater than or equal to the license count for Year 1.

1

See detailed instructions on using this tab

If you have multiple profiles built into your CPS, please combine the license counts from each profile. For example:

- Profile 1 – 400 Microsoft 365 E5
- Profile 2 – 500 Microsoft 365 E5
- Enter 900 Microsoft 365 E5 into the calculator for Years 1, 2, and 3.

If you have a SKU with some licenses with one SKU Type and some licenses with another SKU Type then choose Step-up as the SKU Type. Resetting this sheet will set all of the license counts back to 0 and all of the SKU Types to USL. The prices will change back the price list values.

2

Sales Scenario - use this input to automatically populate Licensing, Current Environment, and Deployment inputs for upsell targets

Other

Licensing Inputs - what licenses is Contoso planning to purchase?

Scroll right to enter pricing ramp

4

Important! For a pricing ramp enter the percent of the price to be used

Enterprise	Office 365 E3	USL	\$20.70	-	-	-	
Enterprise	Office 365 E1	USL	\$8.30	-	-	-	
Enterprise	Office 365 F3	USL	\$4.00	-	-	-	

Be sure to update the price for each SKU, the default price is ERP pricing and the appropriate EA level for the number of users entered.

Advanced BC

Current Environment worksheet for vendor displacement

Building a Business Case

1. Use buttons to get detailed instructions, see competitor pricing sources, or download questionnaire to email to customer for offline data collection.
2. Enter % discount to account for volume discounts or reduced pricing (applied globally)
3. Enter a **current Microsoft 365 or Office 365 SKU** if the customer is already in the cloud. Enter the cost savings from Microsoft cloud solutions. This data will populate the Current Solution column and flow to the deployment tab.
4. Select Competitive Solutions by Capability or Sub-capability via drop-down. Also enter Microsoft products being used. This data will flow to the Deployment tab
5. Specify if this is an existing solution or one being considered for purchase
6. Where competitor pricing is available, it will pre-populate based on the user count (can also be overridden or entered if blank)
7. Enter year of contract cancellation or when they benefits should begin
8. Use the navigation bar to go to the next tab or **"Results"**

Microsoft Contoso Modern Work and Security ROI Analysis

Current Environment | Contact Support | Reset Selected Entry | Reset Sheet | Show all rows | Hide unused rows

8

Based on the estimates entered into this tool, you only need to justify a savings of \$7,800 over the next 3 years through benefits in addition to vendor consolidation from Microsoft 365.

Instructions

See detailed instructions on using this tab | See competitor pricing information sources | Download Customer Questionnaire

How to use this tab:
We want to support the discussion of two distinct cost savings opportunities around vendor consolidation:
1. Vendor displacement - replacing existing point solutions with Microsoft 365 solutions
2. Cost Avoidance - Avoiding the purchase of additional third-party solutions by using Microsoft 365 solutions

If you are already using Microsoft solutions you can track those also and they will show up as already deployed in the Deployment tab.

Discount applied to competitor retail pricing: 0%

Current Microsoft 365 License Bundle - enter standalone SKUs below:

Current Microsoft 365 license spend that will be removed from Current Solution column:

Entering a current license will set the associated capabilities to the Microsoft product - you can override if necessary.

Current license spend is for standalone SKUs or bundles that will be replaced with Office 365 solutions that will still be on the new CPS, such as if you are using a Step-Up SKU.

3-year vendor consolidation savings

Microsoft 365 Cost

4

Instructions

Enter the deployment schedule for each product being purchased.

Use the Deployment Plan entry to set the starting year for the deployment. At Purchase means you will have users deployed right away and receive benefits in year 1. Delaying will delay any benefits. Already Deployed and Will not Use will remove the product from the analysis.

You can also enter the number of users who will receive access to the product each year. These entries are useful if you will deploy a product, but only to a subset of your users.

You can use the Reset buttons to change all or some of the tool inputs back to the default values from the Forrester TEI reports. Deployment Plan will reset to At Purchase and the Deployed Users will reset to the number of licenses available for each product.

Deployment Inputs - When will Contoso deploy the products they have licensed?

2

3
